JOSE MONTEJO

Greater Atlanta Area (Lawrenceville, GA) • joselmonte03@gmail.com • Portfolio • LinkedIn • GitHub • U.S. Citizen

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript (ES6+), Java, SQL, HTML5, CSS3, JSON, Bash Basics

Backend & APIs: FastAPI, Node.js, Express, RESTful API Design & Integration, Pydantic, Asynchronous Request Handling (AsyncIO), JWT Authentication

Frontend & Full-Stack: React (Hooks, State Management, Component Lifecycle), Vite, Client-Side Form Validation, Responsive Web Design, WordPress Widget Embedding

Databases & Persistence: SQLite, SQLAlchemy (ORMs), MySQL (3NF Relational Modeling), MongoDB (NoSQL), Schema Validation & Constraints

AI Integration & Quality: LLM API Integration (Groq, Ollama), Model Context Protocol (MCP), Lexical Retrieval & RAG, Tool Calling, Deterministic Validation Guardrails, Responsible AI Inspection (Codex, ChatGPT)

Testing, Tooling & Practices: Automated Testing (Pytest, Mock Fixtures, Unit Tests), Git/GitHub (Feature Branches, PRs, Code Reviews), Postman, Linux/WSL, Agile/Scrum Principles, Bilingual (English & Spanish)

PROFESSIONAL SOFTWARE ENGINEERING EXPERIENCE

DA SILVA INTERNATIONAL / CAST TOURS **Sep 2026 – Present**

AI Research Team Member / Software Development Intern | Remote | Python, FastAPI, JavaScript, Groq, REST APIs, Pytest, Git, Render

- Architected, built, and publicly launched a production bilingual (EN/ES) AI travel assistant backend in Python and FastAPI, serving a custom JavaScript chat interface embedded across 6 authorized public WordPress pages.
- Integrated high-speed Groq inference with approved trip-specific knowledge and lexical retrieval across curated catalog itineraries to generate grounded, context-accurate responses.
- Engineered deterministic validation layers, strict Pydantic JSON schemas, privacy safeguards, and automated fail-closed escalation workflows safely referring unconfirmed or out-of-scope inquiries to human staff.
- Investigated and resolved a critical production defect where an iframe sandbox missing `allow-forms` blocked message submissions; implemented the fix, authored automated regression coverage, verified production behavior in Chrome, and coordinated launch milestones with company stakeholders.

SELECTED TECHNICAL PROJECTS

FIELDWORK — AI PRODUCT RESEARCH & WORKFLOW AGENT (V1.0.1) **2026**

Full-Stack Application (Local Acceptance Verified) | React, TypeScript, Python, FastAPI, SQLite, SQLAlchemy, Ollama, Tavily

- Architected an end-to-end research application pairing a modular React/TypeScript frontend with an asynchronous Python/FastAPI backend to execute multi-step web retrieval and synthesis workflows.
- Designed persistent relational database models with SQLite and SQLAlchemy to log durable workflow jobs, audit event history, and track state transitions across runtime sessions.
- Integrated native Ollama tool-calling routines and external search APIs (Tavily), featuring server-side deterministic citation validation, request timeouts, and automated failure recovery loops.

DETAILDESK — COLLABORATIVE FULL-STACK SERVICE BUSINESS APPLICATION **2026**

Academic Full-Stack Prototype | Team Developer | React, Vite, Node.js, Express, SQLite, Git/GitHub

- Collaborated in a shared multi-developer GitHub repository utilizing feature branches, pull requests, and peer code reviews to build full-stack service quote and appointment workflows.
- Implemented frontend interface personalization and responsive design updates (merged via PR #14), mobile quote form header enhancements (PR #3), and local-date handling and same-photo re-upload bug fixes (PR #5) in React.
- Reviewed and requested improvements to Jules-generated frontend unit tests (PR #9), and reviewed and approved Jules-generated backend tests authored through Quincy's task (PR #13), merging approved suites to maintain test coverage and validate SQLite persistence.

AI JOB SEARCH — AUTOMATED DATA INGESTION & NORMALIZATION PIPELINE (V1.0.0) **2026**

Python Data Pipeline Project | Python, REST APIs (Adzuna), Pytest, JSON, Linux/WSL, Git

- Built a modular, deterministic Python data pipeline querying external REST APIs (Adzuna) to automate collection, parsing, and normalization of irregular job market records into structured Python data models without LLM dependencies.
- Implemented role alias matching algorithms and multi-criteria business filtering logic across location, role title, employment type, and work arrangement parameters.
- Engineered automated Pytest test coverage (18 tests) with mock network fixtures to validate job normalization, role matching, preference filtering, pipeline behavior, and graceful handling of HTTP request errors.

EFOLIO — COLLABORATIVE FULL-STACK WEB PLATFORM **Jan 2026 – May 2026**

Academic Capstone Project | Full-Stack Developer & Client Liaison | React, Node.js, Express, MongoDB, REST APIs, Git

- Collaborated within a 3-developer Agile team across 3 client discovery sessions to translate stakeholder requirements into technical specifications, React UI components, and modular Express/MongoDB REST APIs with JWT authentication.

EDUCATION

Georgia Gwinnett College — Lawrenceville, GA **Expected Dec 11, 2026**

Bachelor of Science in Information Technology — Software Development Concentration | GPA: 3.83/4.00

Relevant Coursework: Software Development I & II (Java OOP), Data Structures & Algorithms, Database Systems (SQL), Systems Analysis & Design

Georgia State University — Perimeter College — Atlanta, GA **Dec 2023**

Associate in Science in Computer Science | GPA: 3.84/4.00
